

BUSINESS AND NONINSTRUCTIONAL OPERATIONS

It is the Lynchburg City Schools' position that we must do everything within reason to conserve both energy and the money associated with its provision.

Thermostats have been adjusted by maintenance personnel in accordance with commonly accepted comfort levels, equipment needs, and any applicable national, state, and/or local guidelines. Any deviation from the above described adjustment should be reported to maintenance (on a work order request) for investigation and correction as needed.

No one is to adjust the thermostats except maintenance personnel. Tampering with thermostats will be looked on with disfavor. Electric heaters or other supplemental heating devices will not be permitted.

In oil heated elementary buildings the principal will have the custodian turn the furnace completely off as soon as the early morning chill is eliminated. Heat from the lights and bodies will maintain a comfortable environment.

In communicating with the parents by writing, or in PTA meetings, please advise them of our plans and ask them to dress their children accordingly.
